## 2012 In Review

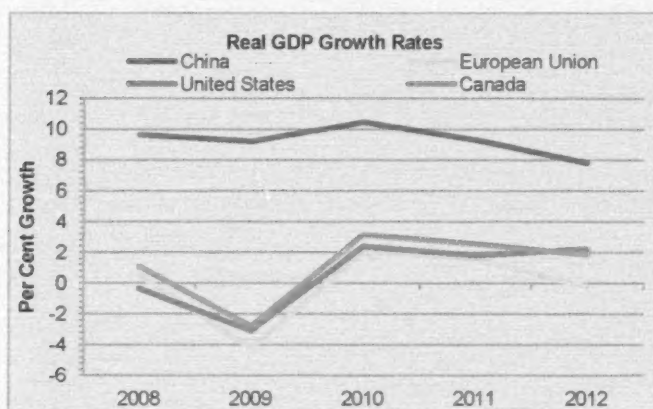

### Introduction

The economic fortunes of Saskatchewan are influenced by the state of the global economy and commodity prices. In 2010, the global economy bounced back after the financial crisis, but growth has been moderating ever since. The continuing slowdown has been caused by significant austerity across most of the developed world. However, even under these challenging circumstances, economic growth in emerging markets, like China, remained robust and continued to support commodity prices.

### Global economic growth

The United States, Saskatchewan's largest trading partner, grew by 2.2 per cent in 2012, up from 1.8 per cent in 2011. In contrast, Canadian economic growth slowed to 1.8 per cent last year from 2.6 per cent in 2011.

China and the European Union, two important markets for Saskatchewan, also lost some momentum in 2012. The European Union, wracked by fiscal and monetary problems, slipped into recession. China's growth slowed to 7.8 per cent in 2012, historically low for China, but remains one of the fastest growing economies in the world.

Source: IMF, World Economic Outlook Data Set

### Oil & natural gas

The price for WTI crude oil averaged \$94.20/barrel in 2012, about the same as the 2011 average of \$95.11/barrel.

3,218 oil and natural gas wells were drilled in 2012, 320 less than in 2011.

The methods of reporting and recording activity in the oil and gas industry in Saskatchewan underwent a complete overhaul in 2012; this has caused delays in reporting production, sales, and prices. Also the new methodologies produce data which are not necessarily comparable to the data produced under the old system. At the time of publishing we are unable to provide robust hydrocarbon statistics for the year 2012.

### Potash

The average price of a tonne of potash in 2012 was \$721.30/tonne, up from \$684.69/tonne in 2011. Potash production in 2012 was 8.280 million tonnes, down from 10.378 million tonnes in 2011, a record setting year. Potash is Saskatchewan's second largest mineral export with \$6.0 billion in sales in 2012, down from \$6.8 billion in 2011.

Saskatchewan sells the majority of its potash to the United States, but Brazil, Indonesia and China are becoming increasingly important markets.

### Uranium

Saskatchewan has historically been the world's largest uranium producer, but was surpassed by Kazakhstan in 2009. However, Saskatchewan continues to be a major player in the global uranium market and uranium mining continues to be a significant component of the provincial economy. Uranium is Saskatchewan's third largest mineral export after oil and potash. However, because of the limited number of producers operating in the province, values and quantities of production are kept confidential.

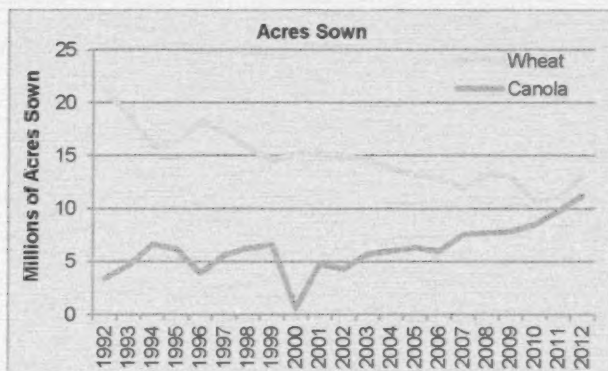

## Agriculture

In 2012, a total of 34,505,000 acres were seeded, significantly above the 10-year average of 32,610,000 acres. Seeded acres rebounded after severe flooding in 2010 and 2011 made seeding in some areas impossible.

In 2012, there were 13,095,000 acres sown to wheat, an increase of 1,950,000 acres compared to 2011. For the past two years, acres sown to wheat have increased after reaching a modern day low in 2010 of 10,330,000 acres.

Canola has continued to grow in importance to Saskatchewan's agricultural sector. Canola was sown in 11,220,000 acres in 2012, a record year, and an increase of 1,320,000 acres over the previous record-setting year of 2011.

Net farm cash income from operations hit an all-time high in 2012 of \$4.258 billion, surpassing the previous record of \$4.028 billion in 2011. Canola was the primary driver of the record-setting year by having both record high prices \$546/tonne and near-record production of 6.137 million tonnes.

## Employment & income

Saskatchewan added 11,200 new jobs in 2012. Of these new jobs 10,400 were full time jobs. Unemployment in Saskatchewan averaged 4.7 per cent in 2012, 0.3 per cent lower than the 2011 average of 5.0 per cent.

Average weekly earnings in Saskatchewan went up 4.7 per cent in 2012, and in the past five years have increased 17.1 per cent.

In 2012, the mining, quarrying, oil and gas sector continued to offer the highest average hourly wages in the province at \$40.18/hour.

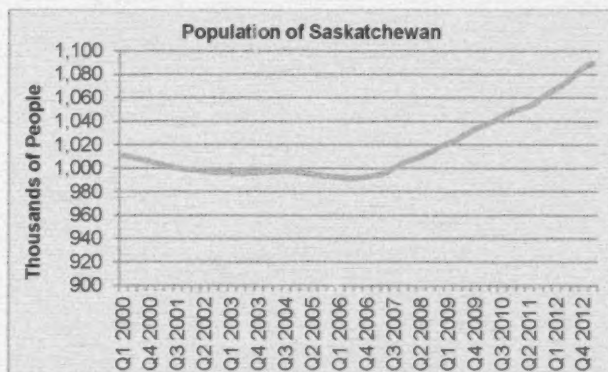

## Investment

New capital investment hit an all-time high in 2012 of \$20.889 billion surpassing the record-setting year of 2011 by \$1.283 billion. Investment was led by the mining oil and gas industry at \$8.262 billion, followed by housing at \$3.618 billion.

## Population

There were 15,035 births in Saskatchewan in 2012 and 9,363 deaths resulting in a natural population increase of 5,672. Additionally, in 2012, there were 16,018 more people that moved to Saskatchewan than left, of which 13,371 were from other countries and 2,647 were from other provinces. Combined natural increase and net immigration have resulted in a total population increase of 21,690 over the year. At the end of 2012, the population of Saskatchewan reached an estimated record high of 1,089,807.

---

## **Housing**

Saskatchewan's rising population and incomes have been fueling a residential construction boom. In 2006, residential building permits totaled \$493 million. By 2012, the value of residential building permits rose to a record high of \$1.823 billion, an increase of 370 per cent.

The number of housing starts in Saskatchewan peaked in 1976 at 13,143, after that housing starts declined to a low of 998 in 1991. In 2012, there were 9,968 housing starts, ten times more than 21 years ago and up from 7,031 in 2011.

## **Retail trade**

Retail trade hit an all-time record high in 2012 of \$17.330 billion, an increase of \$1.096 billion over the record-setting year of 2011. Saskatchewan for the first time ever had more retail sales than did Manitoba, which in 2012 was \$16,670 billion.

## **Utilities**

Rapid economic growth has been driving increases in Saskatchewan's electricity consumption. Saskatchewan consumed 22,129 GWh in 2012, a new record, surpassing the previous record set in 2011 of 21,611 GWh. For several years prior to 2008, Saskatchewan was a net exporter of electricity, but for the past 5 years

Saskatchewan has been a net importer of electricity. In 2012, Saskatchewan had net electricity imports of 196 GWh, most of which came from Manitoba.

Most of the increase in electricity demand was met by increasing use of natural gas turbines. Natural gas powered supply increased from 4,032 GWh in 2011 to 4,968 GWh in 2012.

In 2011, Sasktel launched its fiber to the premises program which aims to provide a fiber optic connection to each house in Saskatchewan's major cities by 2017.

In 2012, Sasktel began the process of building a LTE wireless network which uses the spectrum previously used by analogue TV signals to provide wireless data connections.

## **Conclusion**

Saskatchewan has what the world wants, mainly energy, food and potash. Increasing global demand for Saskatchewan's exports is fueling economic growth and is creating new jobs. People from all over the world are moving to Saskatchewan because of its low unemployment and a growing jobs market. The influx of people is driving the construction and trade sectors creating a broad-based virtuous cycle.
